

NIMBUS CHEMTECH

Intermediate Products Portfolio

#	PRODUCT CATEGORY	TECHNICAL SCOPE	SYNTHESIS & COMPLIANCE STANDARD
01	Advanced KSMs	Key Starting Materials for multi-step chemical synthesis of high-value APIs.	Audited GMP synthetic routes, impurity profile tracking, and complete batch tracing.
02	Chiral Intermediates	Enantiomerically pure synthesis building blocks and resolving agents.	High optical purity (>99% ee) compliant with regulated ICH Q7 guidelines.
03	Heterocyclic Compounds	Pyridine, piperidine, pyrimidine, and imidazole functional cores.	Custom scale synthesis from gram-scale trials up to multi-metric ton commercial supply.
04	Protected Amino Acids	N-protected and C-protected derivatives for peptide and steroid synthesis.	USP/Ph. Eur. analytical validation with HPLC/NMR characterization dossiers.
05	Active Coupling Reagents	Carbodiimides, phosphonium, and uronium-based activating agents.	High reactivity, low racemization risk, optimized for industrial scale yield.
06	Custom Synthesis	Contract synthesis and scale-up of proprietary non-catalog intermediates.	Strict confidentiality (NDA), technology transfer, and DMF documentation support.

Notice: This interim portfolio lists core chemical categories. Full commercial catalogs, CAS-indexed product listings, and Certificates of Analysis (COA) are provided upon direct inquiry.
